

REMARKS

Certain claims have been broadened by deletion of the term "predetermined" which has been removed to avoid any unintended interpretation. The term originally appeared in the claim with the intent of simply providing a label for packet types, without intent to impose any limitation on the packet type.

Certain claims have been modified to more specifically reflect multiple partial encryption, which is currently believed to be a commercially important embodiment.

Certain claims have been broadened by deletion of the term "dual" in favor of the broader term "multiple" in order to assure that the term is not interpreted to mean "exactly two", rather than the intended meaning of "two or more than two". Certain claims have also been broadened by deletion of the term "television program" in favor of the broader term "television signal." Certain claims have been broadened by changing terminology regarding "decrypting and decoding" to simply "decrypting." Certain claim dependency errors and antecedent basis errors have been corrected.

Certain minor typographical errors and other minor errors such as incorrect references to reference numbers in the specification have been corrected. No new matter has been added by such amendments. Further, some claims have been added to claim subject matter originally disclosed, but not claimed. Some amendments to the claims are made to eliminate any limitation on the way a packet is specified for selection.

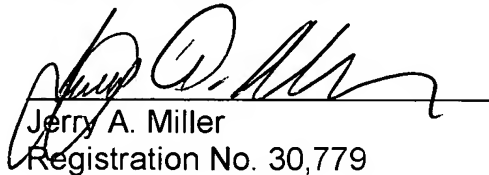

New claims are being presented for the examiner's consideration.

No amendment made herein was related to the statutory requirements of patentability unless expressly stated herein.

REQUEST FOR INTERVIEW

The undersigned respectfully requests the courtesy of an interview in the current application and wishes to point out that the current application is related to several other applications. It is submitted that a pre-examination interview may assist the Patent Office in efficiently examining a significant number of patent applications. The undersigned recognizes that these applications contain numerous claims for numerous embodiments of related inventions and regrets the burden this places on the Patent Office. It is sincerely hoped that granting a pre-examination interview may relieve some of this burden and facilitate examination of this collection of applications.

Respectfully submitted,

Jerry A. Miller
